About Chipworks

Chipworks is the recognized leader in reverse engineering and patent infringement analysis of semiconductors and electronic systems. The company's ability to analyze the circuitry and physical composition of these systems makes them a key partner in the success of the world's largest semiconductor and microelectronics companies. Intellectual property groups and their legal counsel trust Chipworks for success in patent licensing and litigation – earning hundreds of millions of dollars in patent licenses, and saving as much in royalty payments. Research & Development and Product Management rely on Chipworks for success in new product design and launch, saving hundreds of millions of dollars in design, and earning even more through superior product design and faster launches.
